Curved Ceilings

Soft undulating shapes, curves, dramatic bulkheads - all design possibilities with Luxalon® Curved ceilings from Hunter Douglas. Explore your creativity and break boundaries - inside the curve.
FLEXIBLE BY DESIGN

Luxalon® Curved ceilings from Hunter Douglas add a twist to the traditional. Imagine concave, convex, and undulating forms that tempt a look upwards.

Create soft curves and sculpted shapes with Luxalon® Curved ceilings. 300C (300 mm wide) and 84R (84 mm wide) panels can curve up to 90 degrees, perfect for opening up public spaces. The Luxalon® curved carrier system helps to transform standard flat panels into dynamic ceiling designs.

The curve doesn’t need to stop at the ceiling. Luxalon® Curved ceilings can partially - or completely - clad surrounding walls. Over 20 colours and finishes will ensure you create the perfect look for your project.

LONG LASTING, LOW MAINTENANCE

Luxalon® Curved ceilings are manufactured from roll-formed aluminium coil. Finished with a polyester paint, these ceilings are durable and low maintenance. The coating is stove enamelled in a continuous coil coating process, which ensures uniform coating thickness and absolute adhesion.

For exterior applications, please request aluminium panels with our exclusive Luxacote® finish.

ALL-ACCESS PLENUM

Most Luxalon® ceiling panels allow full plenum access, and can be easily demounted by hand.
PERFECTLY PERFORATED ACOUSTICS
Improve the acoustics in a space with ceiling panel perforations Ø1.5 or 2 mm. Luxalon® perforated panels come with a special sound-absorbing non-woven tissue glued into the panel, further enhancing acoustical performance.

PROVEN FIRE PROTECTION
All Luxalon® metal suspended ceilings are fully tested for reaction to fire in official fire tests at Efectis, Rijswijk - an independent Dutch fire research institute. The ceilings are classified A2,s1,d0 according to EN 13501-1, and will therefore not contribute to possible fires.

For more information visit www.hunterdouglasarchitectural.eu

Luxalon® Curved ceilings give you freedom in design. Our ceiling systems are versatile, and create a variety of visual effects including unique radial and diagonal patterns and flowing curves.

Designed to work for you
300C Curved

PANELS
The 300 mm wide panels (1) are made to measure and curved with a maximum standard length (L) of 6000 mm. Easy to fix, to the standard 300C carrier (2), one side of the panel is hung on the prongs of the carrier and then the other side is pressed in with an upward movement.

The panel carrier, which is black, and made of 1.0 mm thick galvanised steel or 0.95 mm thick aluminium, is provided with prongs that accommodate the panels. Integrated locking clips on the carrier can lock the panels, where required.

Carriers have a standard length of 5000 mm and are connected by the carrier splice (3). Panels are connected in length by applying a panel end connector (4) on cross sections of four panels (or two panels at the edge), still allowing easy demounting. A nonius hanger (5) and fixing pieces (6) are provided for suspension. Trimming curved and straight edges is possible - see our various edge trimming options for more information.

MAXIMUM SPANS
* Depending on the radius: min. span for radius is 1000 mm, max. span for radius > 50 meters.
** Depending on panel length from 1 to 6 meter.

DIMENSIONS & WEIGHTS
Panels from 250-1000 mm and > 6000 mm are available on request.
* Min. weight for flat panels; max. weight for radius 1000 mm

MATERIAL REQUIREMENT PER M²
The requirement depends on the execution of the curve and ceiling.
For a flat ceiling the material requirement would be:
* Depending on panel length from 1 to 6 meter.
** Depending on radius and carrier type.
## AVAILABLE CURVED PANEL TYPES

Minimum radius (R) for convex curves approx. 1000 mm, for concave curves approx. 1100 mm.

**PLENUM ACCESSIBILITY**

The 300C Carrier System allows for easy panel demounting. Each panel is fixed to the carrier, which allows each to be removed individually. Use a special shoe-horn shaped tool to remove the panels (available on request).

Apply panel end connectors at cross sections between four panels (or at edges of two panels) to keep the panels aligned.
Acoustics 300C Curved

PERFORATION OPTIONS
Panels can be supplied perforated with a Ø of 1.5 or 2.0 mm (open area of 23% and 16%). As a standard feature, perforated panels are supplied with a sound absorbing non-woven tissue glued into the panel for enhanced acoustical performance.

- Curve 1 $\alpha_s$ 300C
  Ø 2.0 mm perforated panels, provided with 0.2 mm thick, black non-woven acoustic tissue glued over the whole perforated area. Plenum depth is 400 mm.

- Curve 2 $\alpha_s$ 300C
  Ø 1.5 mm perforated panels, provided with 0.2 mm thick, black non-woven acoustic tissue glued over the whole perforated area. Plenum depth is 400 mm.

- Curve 3 $\alpha_s$ 300C
  Ø 1.5 mm perforated panels, provided with 0.2 mm thick, black non-woven acoustic tissue glued over the whole perforated area plus 25 mm thick mineral wool pad with a density of 16 kg/m³. Plenum depth is 400 mm.

SOUND ABSORPTION DATA 300C (straight 300C panel)

$\alpha_s$ = sound absorption degree: an absorption of 1.0 indicates a 100% absorption of sound.

</table>

Note: Panels have a nominal plain border of 8.5 mm along the longitudinal panel direction in order to assure maximum flatness and product stability.

The 300C Wide Panel ceilings were tested by TNO Delft (The Netherlands), an independent official testing institute. Report no.: TPD-HAG-RPT-94-0037
84R Curved

PANELS
The 84R ceiling system consists of round-edged panels (1) which can be easily clipped on a carrier (2). The panels can be joined with the panel splice or by clipping the panels over each other. Curved 84R ceilings can be created by using a flexible carrier or curving the panels (1).

SUSPENSION
The panel carrier (2) is provided with prongs to accommodate the panels in a standard module of 100 mm. All carriers have a standard length of 5000 mm, and are connected by the carrier splice (5). A nonius hanger (3) and fixing pieces (4) are provided for suspension.

MAXIMUM SPANS
* Minus 200 mm in case of acoustic pads.

</tbody>
</table>

MATERIAL REQUIREMENT PER M²:
The required number of components depend on individual project requirements. Figures are based on maximum spans.

FIXED AND VARIABLE
Curved panels help create concave, convex or undulating ceilings with a fixed radius of 325 mm, or a variable minimum radius of 1250 mm, achieving dramatic visual effects while also accommodating varying heights. Panel angles can vary between 0 degrees (flat panel) and 90 degrees.

Outside corner (fixed radius)

\[
L = C + D + (\alpha \times 5.62)
\]

Inside corner (fixed radius)

\[
L = C + D + (\alpha \times 5.72)
\]
84R Curved

AVAILABLE CURVED PANEL TYPES
Standard minimum radius for all curves approx. 1250 mm (exterior 1000 mm).

</tr>
</tbody>
</table>

APPEARANCE
- A linear, open ceiling surface using a concealed carrier suspension system allows the chosen panel curve to determine the appearance of the ceiling.
- The easy panel-on-carrier suspension system, the same as in the standard 84R ceilings, allows for easy transition to straight ceilings using the same panel.
- Long and narrow panel ceilings, length made to measure up to 6000 mm, allow swift installation (especially in larger areas) and reduce the needs for joints to a minimum.

* Curved panels feature straight ends of min. 130 mm.

I: Multiple panel curved ceilings:

II: Single panel curved ceilings

Tested by Peutz; test report no: A 2760-1E-RA-001
**Curved Carrier**

**PRINCIPLE**
Consider a different and dramatic design - a curved ceiling with straight panels. This ceiling is possible when you use the Multi Panel system and the panel systems 84B, 84R, 70U and 300C.

**BENEFITS**
- A standard product and production process creates an extremely cost effective curved metal ceiling solution.
- Curved carriers support concave, convex or undulating ceilings, creating dramatic visual effects while accommodating varying heights.
- Long and narrow or Wide panel ceilings are made to measure up to 6000 mm, which allows for swift installation (especially in larger areas) and reduces the need for joints to a minimum.
- The same easy panel-on-carrier suspension system as used on standard ceilings, allowing easy transition to straight ceilings using the same panel.

- Proven Fire Protection
Luxalon® metal suspended ceilings are classified incombustible and will therefore not contribute to possible fires. When ceilings need to protect the structural integrity of the building, Luxalon® ceilings offer a range of practical and tested solutions with regards to fire resistance and fire stability.

- Environment
Hunter Douglas is dedicated to manufacturing sustainable products. Our paint and aluminium melting processes are considered industry standards in terms of clean production processes. All of our aluminium products are 100% recyclable at the end of their lifecycle.

- Exterior use
Luxalon® Curved ceilings are ideal for outdoor applications. Our proprietary coil-coating process ensures a strong finish - the Luxacote® system. Luxacote® contains a solid UV filter that guarantees colour-fastness and gloss stability as well as optimal resistance against corrosion, abrasions and scratches.

- Colour range
The standard Hunter Douglas interior and exterior colour range for Luxalon® Ceiling systems includes a wide variety of colours and finishes. See the Luxalon® colour chart for all available options. All RAL and NCS colours are also available on request.

- Tolerances
As a member of the Technical Association of Industrial Metal Ceiling Manufacturers (TAIM), Hunter Douglas complies with tolerance criteria as specified in the TAIM Technical Manual for Metal Ceilings.

CURVED CEILING POSSIBILITIES
Curved panels: 84R, 300C
Segmented carriers: 300C
Flexible carriers: Multipanel, 84B, 84R, 7OU

LUXALON® EXTERIOR CEILINGS

Luxalon® Exterior ceilings are developed to withstand all weather influences including intensive sunshine, dramatic temperature changes, moisture, pollution, and strong wind loads. Their durability comes from our special aluminium alloy, and the patented Luxacote® system. Luxalon® Exterior ceilings are ideal for use in canopies, shopping centres and railway/underground stations.

- Special alloy of corrosion-resistant aluminium
- Luxacote® coating system resistant to UV, scratches and vandalism and is rain-, dirt- and snow-proof
- Tested for wind loads

For more than 60 years, we’ve been fortunate enough to help turn countless innovative sketches into innovative buildings. Architects, designers, investors and contractors from around the world have taken advantage of Hunter Douglas’ unmatched product development, service and support. Chances are, you’ve seen more of Hunter Douglas than you think.

Major operation centres in Europe, North America, Latin America, Asia and Australia, we’ve contributed to thousands of high-profile projects, from retail and commercial facilities to major transit centres and government buildings.

Not only are the world’s architects and designers our partners, they’re our inspiration. They continue to raise the bar for excellence. We create products that help bring their visions to life: Ceilings, Sun Louvres and Façades.
Hunter Douglas adopts the cradle to cradle (C2C) product philosophy to the design of products that fit the circular paradigm. Both our metal and felt ceilings are Cradle to Cradle™ Bronze certified. They are designed for longevity, using materially healthy technical nutrients that can be reused at end of life as a high-quality source for something new.

Cradle to Cradle Certified™ is a certification mark licensed by the Cradle to Cradle Products Innovation Institute.

ARCHITECTURAL SERVICES

We support our business partners with a wide range of technical consulting and support services for architects, developers and installers. We assist architects and developers with recommendations regarding materials, shapes and dimensions, colours and finishes.

We also help with the creation of design proposals, visualisations, and installation drawings. Our services to installers range from providing detailed installation drawings and instructions to training installers and advising on the building site.
